Art Unit: 3617

Drawings

Page 2

1. The drawings are objected to because Figure 2A lacks reference characters for certain elements of the invention. The pin located at the outer end of the unthreaded portion 54 of the shaft 48, the pin extending from the ledge of the central portion 50 of the shaft 48 (and parallel to the threaded portion 52), and the apparent locating hole in the washer 79, all lack reference characters.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3, 6-9, 11, and 14-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Levy et al. Figures 5-6 of Levy et al show a spinner hub cap including a base plate 7 adapted for attachment to a wheel 4. A shaft 9 includes a central portion, an inner end 17 attached to the base plate 7, and an opposing outer end (generally shown at 31). An outer plate 11 is retained on the outer end of the shaft 9, and is free to rotate about the outer end of the shaft 9, due to a bearing 13 attached to the outer plate 11 and disposed about the central portion of the shaft 9. A hubcap shell 5 is attached to the outer plate 11 (best shown in Figure 5).

Both the outer plate 11 and the hubcap shell 5 are capable of rotating about the shaft 9 in response to inertia and other stimuli (such as wind, etc) after the initial rotation of the wheel 4. The hubcap shell 5 is capable of rotating at a rate independent of the speed of rotation of the wheel 4.

The exterior surface of the outer end of the shaft 9 is smooth. A retainer plate 26 is mounted between the base plate 7 and the outer plate 11. As shown in Figure 5, the hubcap shell 5 includes plural openings therethrough to allow plural bolts to attach the hubcap shell 5 to the outer plate 11. At least one balancing weight 12 is attached to the inner surface of the hubcap shell 5.

Art Unit: 3617

Allowable Subject Matter

4. Claims 2, 4-5, 10, and 12-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references are considered to show spinner hubcaps and the mounting structure for attaching the spinner to a wheel. For example, Fowlkes shows a spinner hubcap including a base plate for attaching the spinner to a wheel.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason R Bellinger whose telephone number is 703-308-6298. The examiner can normally be reached on Mon - Thurs (9:00-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Morano can be reached on 703-308-0230. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
